

CheckPlusEnterprise

Management of Check Printing Throughout the Enterprise

CheckPlusEnterprise is a robust, fully featured payment solution designed to meet the special disbursement needs of large organizations providing a fast, cost-effective and secure way to process and print MICR laser check and electronic disbursements on-demand, while maintaining centralized approval and control of the process.

CheckPlusEnterprise automatically and securely distributes and prints checks to multiple local or remote locations, handling a variety of different disbursement applications and allowing staff to request and print MICR laser checks while maintaining centralized approval and control of the process. The ability to print MICR laser checks remotely reduces mailing costs and security risks.

The system supports complete centralized administration and control, and saves substantial time and money when compared to existing conventional check distribution systems.

After login into the CheckPlusEnterprise system, authorized users can view the status of a job, request check printing and perform any other functions for which they have received the necessary rights. Checks will be printed to a secure and encryption enabled MICR laser printer providing end to end security.

CheckPlusEnterprise is an integrated and scalable payment platform designed to handle all your payment processing needs. From simply generating MICR laser checks or combining the management of MICR laser checks and electronic payments plus remittance information and Positive Pay. CheckPlusEnterprise is a payment platform designed to satisfy the needs of both paper based and electronic payment processing.

When printing MICR laser checks, CheckPlusEnterprise uses blank security check stock to eliminate the security and control issues associated with the preprinted MICR documents. The risk of obsolescence is totally eliminated. Blank security check stock reduces costs and eliminates storage security concerns.

As an added safety feature, when Positive Pay is enabled, your company can create and submit a file to your bank containing the necessary payment information so that the bank can match it against the actual checks being presented for payment. Any discrepancies will be classified as fraud and the check will not be paid.

Scalability is built into the system to allow for growth as volume and payment requirements demand it.

Benefits

- Fast and secure remote printing of your MICR checks
- Centralized control with guaranteed delivery and print confirmation
- Robust security features
- Easy system integration
- Elimination of overnight courier fees
- Significant reduction in check printing costs

Built in Security

- Active Directory Authentication simplifies access administration
- Multi-level comprehensive password protected access
- Users can only view items they are authorized to see
- User groups can be set with a different set of privileges
- Access is available from authorized locations only.
- Printing is limited to authorized printers only
- Comprehensive user activity monitoring
- Secure confirmation of a printed check is sent back to the host to monitor activity
- Critical Event Notification triggers emails to designated administrators after specific activities occur
- Creation and storage of digital copies of checks in .PDF format
- Security font used to print check amount in second location for greater security
- Security watermark printed on the face of the check contains date, amount and payee name
- Signature line embedded with date, amount and payee name for greater security

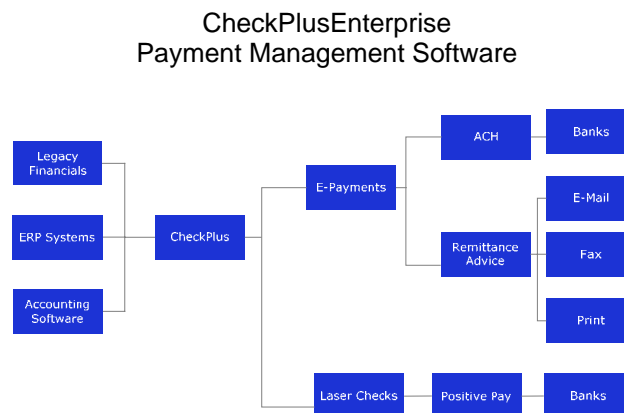

A Cost Effective System

Most traditional centralized check production systems depend on costly overnight courier services to deliver preprinted checks to remote locations. CheckPlusEnterprise eliminates these unnecessary costs by allowing for the remote request, approval and printing of your checks.

With CheckPlusEnterprise, the cost of the checks themselves is significantly reduced with the use of inexpensive blank check stock to print MICR encoded checks. The need to purchase and maintain preprintex checks at remote locations is eliminated saving money and reducing the risk of check fraud.

Easy System Integration

CheckPlusEnterprise is designed to easily integrate with your existing accounting, ERP, or other system to accept secure file uploads to print your checks. The system is tailored to grow to meet your needs.

System Requirements

- **Supported Operating Systems:** Windows Server 2003 Service Pack 2; Windows Server 2008; Windows Vista; Windows Vista Service Pack 1; Windows XP Service Pack 2; Windows XP Service Pack 3
- **32-Bit Systems:** Computer with Intel or compatible 1GHz or faster processor (2 GHz or faster is recommended. Only a single processor is supported)
- **64-Bit Systems:** 1.4 GHz or higher processor (2 GHz or faster is recommended. Only a single processor is supported)
- Minimum of 2 GB of RAM is recommended
- 1 GB of free hard disk space

CheckPlusEnterprise is a Windows Application provided with a Microsoft SQL Server 2008 Express - Advanced Edition Database. Microsoft SQL Server 2008 Express – Advanced Edition is a powerful and reliable data management system that delivers a rich set of features, data protection, and performance for embedded application clients, light Web applications, and local data stores. Designed for easy deployment to integrate seamlessly with your other server infrastructure investments.

However, if you already have installed Microsoft SQL Server 2005 or later, you can restore the CheckPlusEnterprise database to it.

Quality Consumables by Printech

- MICR toner cartridges that meet all ANSI specifications
- Safety check stock. A wide selection available with many security features

Printech Guarantee

MICR readability and performance are guaranteed as long as the MICR laser printer and associated supplies are purchased from Printech or an Authorized Printech representative.
