

CheckPlusFinancial

CheckPlusFinancial is a powerful, flexible and easy to use 32-bit MICR laser check printing software solution that allows financial institutions to print attractive, high quality personal and business check orders in-house as well as Cashier's and Counter check and increase non-interest income. Available in stand-alone or network environments. A full system that processes documents in batches with data imported from your retail delivery system. A stand-alone version allows you to enter information in the CheckPlusFinancial laser check printing software database for processing individual check orders. Data, graphics, logos, and even signatures are all printed in a single pass through a MICR enabled laser printer using blank or preprinted safety check stock.

CheckPlusFinancial streamlines the check production process with increased efficiency permitting control of the check generation process from the originating department to provide a very effective means to resist check fraud.

CheckPlusFinancial is a powerful, versatile and easy to use 32-bit MICR laser check printing software that incorporates the latest advancements in MICR laser check processing technology. Robust and efficient, it provides an effective barrier against check fraud.

CheckPlusFinancial uses blank and/or preprinted security check stock to print attractive and secure customer checks associated with the preprinted MICR documents. Security check stock reduces costs and eliminates storage security concerns.

As an open system product, CheckPlusFinancial provides access to data and support to databases from vendors such as MS SQL, Oracle, Informix, Sybase, Rdb, DB2, and Btrieve. Additionally, input data can be accessed via ODBC or ASCII file interfaces.

Scalability is built into the system to allow for growth as volume and payment requirements demand it.
