

## The plain truth about check printing systems

If your enterprise is still printing checks the old fashioned way with pre-printed check stock on impact or plain laser printers, it is practically inevitable that you will decide to migrate the task to a modern and secure MICR laser with blank safety check stock at some point.

At that time you will find a staggering number of price/performance options. They range from inexpensive "Do It Yourself Software Kits" to full blown Software/Hardware systems at very fancy prices. The trick is in selecting a system that will suffice today and yet be easily expandable to include electronic payment processing, positive pay, reconciliation, remote signature approval and a host of other options when the need arises. Of course any good system must integrate painlessly with your financial system and be almost intuitive to use.

On the surface the major function of a check printing system may be the data transformation necessary to take raw check data from the driving financial system and produce an electronic check image complete with signature(s), logo and the check/stub form itself. In fact this function is fairly trivial when compared to the need for multiple levels of user password controls, signature currency amount and cost center controls, versatile reporting capability, encrypted signature and archival data bases, the ability to drive remote check printers in a highly secure manner, audit trail and check register etc.

Printech's CheckPlus system has been constructed to be highly modular. The most modestly priced entry level system provides all of the basic functions of a good check printing system yet imposes no penalty or inconvenience when the need to upgrade it's functionality arises.

When evaluating system providers in this market, you will want to consider only solid, experienced companies for this critical application. A company that has been around for a long time and whose payment software has been fully tested in the marketplace should be your first choice.

We welcome your call and extend to you an invitation to check us out to see if we measure up to your expectations. Just click on <http://www.printech.com> to review our site at your leisure.

Printech has been around for the past 21 years and first developed CheckPlus 11 years ago. Of course, we never stopped there. CheckPlus undergoes constant refinement and testing.

I invite you to contact us for a frank and confidential discussion of your existing check processing needs and future plans. We will provide you with timely and valuable information regarding the latest trends and technology. There is no obligation.

You can reach us at 305.592.2838 or via e-mail at [checkplus@printech.com](mailto:checkplus@printech.com). A live demo session is available over the Internet. Just give us a call and we will make the necessary arrangements.
